### Meeting Topic

What is SAE doing to address the shortage of qualified engineers? Do you wonder what is being taught in college these days? Know a student interested in studying engineering or thinking of going back to school yourself? What has changed since you competed in a colligate design competition? Answer all these questions and more at this months meeting.

Each year we like to give the students in our section an opportunity to show off what they have been doing. There will be Mini Baja and Formula SAE teams from Georgia Tech, Southern Polytechnic and Auburn. They will be displaying cars, discussing results from last year and presenting plans for this year.

The SAE design competitions have grown tremendously over the years with events on every continent with a college. The level of competition is extremely intense and the teams have

developed into very professional organizations. The graduates from the design teams have achieved tremendous success with the OEMs, suppliers and in racing.

This is always a well attended and exciting meeting that you don't want to miss. If you know of a high school student that is considering an engineering degree, please encourage them to attend the meeting.
